Deviations from Original Design

The project stays true to the spirit of the design of being simple and child friendly.

The first change we made was to the "next few days" and "Hourly forecast" pages, making it so more than three can appear on both. The next few days appears the same as in the prototype but you can scroll down for more days. Then the hourly shows more than three as the screen looked vacant without more.

Also, we originally planned to only have the animation fill up the first time a location is entered but we implemented it so that every time the location screen is opened they fill up again. We did it like this because it demonstrates that the animations work properly and it's nice if the user missed the animation the first time.
